

Film Expert System

Prolog Programming Project

Problem definition:

Film expert system based on logic rules. The Film Recommendation System is designed to suggest movies to users based on their personal information such as age, gender, mood, and minimum movie rating.

The purpose of this project is to create an expert system in Prolog. It aims to enhance the movie-watching experience by providing personalised recommendations. The program allows you to get film recommendations based on your answer and logic rules with a film database.

System Features:

1. Personalised Recommendations:
 - The system tailors movie recommendations based on user-specific information such as age, gender, mood, and minimum acceptable movie rating.
2. Two Menus for User Interaction:
 - Criteria Menu: Users can specify their own criteria for recommendations, such as preferred genre, director, actor, year, and rating.
 - General Questions Menu: Users answer a series of general questions about their age, gender, mood, and minimum rating to receive recommendations.

System Design:

The system is built using Prolog. The knowledge base consists of facts and rules that define relationships between movies, genres, directors, actors, and ratings.

components of the system include:

- Knowledge Base: Contains facts about films, genres, directors, actors, and ratings.
- Filtering Rules: Various rules to filter films based on user's age, gender, mood, and rating preferences.
- User Interaction: The system interacts with users by asking a series of questions to gather their preferences and then provides recommendations based on the collected data.

Knowledge Base Predicates:

- **film(film name)** → predicates the film name and that it exists in the dataset.
- **genre(film, genre)** → defines different film genres like (drama, comedy, crime, action, thriller, adventure, science fiction, etc.).
- **director(director, film)** → predicates the directors of each film.
- **actor(actor, film)** → predicates the actors in each film.
- **year(film, year)** → predicates the year when the film was published.
- **rating(film, rate)** → predicates the rate of the film according to the global rating system.
- **film_sequel(film1, film2)** → predicates that film2 is the next chapter of film1.

Questionnaire:

We asked people about their favourite genres when they have different moods.

We also asked them about their age, gender, minimum rating that is acceptable to watch a film, and favourite actors and directors.

Questions and answers to the questionnaire:

Could you please select your age?

25 responses

25 responses

Do you prefer watching

25 responses

What is the minimum rating you can accept?

 Copy

25 responses

When you are **happy** , what genre of films do you enjoy watching?

 Copy

25 responses

What is your favorite film genre that you turn to when you're feeling **sad** or need a pick-me-up?

 Copy

25 responses

Do you have a go-to film genre for when you're seeking *inspiration* or *motivation*?

[Copy](#)

25 responses

Are there specific movie genres you prefer watching when you're in the mood for a *good laugh*?

[Copy](#)

25 responses

When you're feeling *curious* or *adventurous*, what types of films do you tend to explore?

25 responses

Questionnaire Results:

We created the mood-to-genre mapping based on the results of the questionnaire.

```
mood_genres(happy, [comedy, adventure, thriller, musical, drama, science_fiction, animation, fantasy]).
mood_genres(sad, [comedy, drama, romance, fantasy, animation]).
mood_genres(bored, [science_fiction, action, animation, adventure, fantasy, mystery]).
mood_genres(normal, [thriller, action, comedy, romance, animation, biography]).
mood_genres(adventurous, [adventure, thriller, mystery]).
mood_genres(excited, [action, science_fiction, mystery, adventure]).
mood_genres(stressed, [animation, comedy, family]).
```

Also, the questionnaire results were used to determine the gender-to-genre mapping.

```
gender_genres(female, [drama, comedy, romance, science_fiction, adventure]).
gender_genres(male, [action, thriller, crime, comedy, adventure, science_fiction]).
```

And by adding many films for the actors and directors who were most chosen in the questionnaire.

Recursive Relationships:

1. **Sequel Relation:** keeps recursing and adding to the list till it finds all sequels of a series
2. **Sequel Length:** keeps recursing and incrementing length till it covers all films available in series.

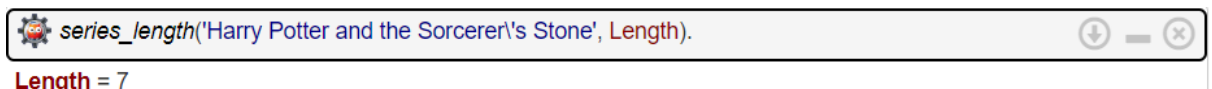

```
sequel(_, []).
sequel(X, [Head|Tail]) :-
    film_sequel(X, Head),
    sequel(Head, Tail).

series_length(Movie, Length) :-
    series_length_calc(Movie, 0, Length).

series_length_calc(Movie, Acc, Length) :-
    film_sequel(Movie, Sequel),
    NewAcc is Acc + 1,
    series_length_calc(Sequel, NewAcc, Length).
series_length_calc(_, Length, Length).
```

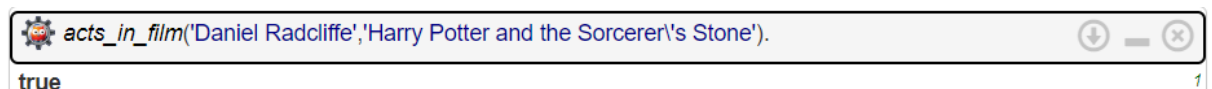

Queries Examples:

- series_length('Harry Potter and the Sorcerer's Stone', Length).

A screenshot of a query result window. The title bar shows a gear icon, the query text `series_length('Harry Potter and the Sorcerer's Stone', Length).`, and window controls. Below the title bar, the result `Length = 7` is displayed.

- acts_in_film('Daniel Radcliffe', 'Harry Potter and the Sorcerer's Stone').

A screenshot of a query result window. The title bar shows a gear icon, the query text `acts_in_film('Daniel Radcliffe', 'Harry Potter and the Sorcerer's Stone').`, and window controls. Below the title bar, the result `true` is displayed.

- get_rating('Up', Rate).

A screenshot of a query result window. The title bar shows a gear icon, the query text `get_rating('Up', Rate).`, and window controls. Below the title bar, the result `Rate = 8.2` is displayed.

- get_actor('Interstellar', Actor).

```
get_actor('Interstellar', Actor).  
  
Actor = jessica_chastain  
Actor = matthew_mcConaughey  
Actor = anne_hathaway
```

- `get_film('jessica_chastain', Film).`

```
get_film('jessica_chastain', Film).  
  
Film = 'Interstellar'
```

- `get_film('Emma Watson', Film).`

```
get_film('Emma Watson', Film).  
  
Film = 'Harry Potter and the Sorcerer's Stone'  
Film = 'Harry Potter and the Chamber of Secrets'  
Film = 'Harry Potter and the Prisoner of Azkaban'  
Film = 'Harry Potter and the Goblet of Fire'  
Film = 'Harry Potter and the Order of the Phoenix'  
Film = 'Harry Potter and the Half-Blood Prince'  
Film = 'Harry Potter and the Deathly Hallows: Part 1'  
Film = 'Harry Potter and the Deathly Hallows: Part 2'
```

- `series_length('Harry Potter and the Sorcerer's Stone', Length).`

```
series_length('Harry Potter and the Sorcerer's Stone', Length).  
  
Length = 7
```

- `h`

```
sequel('Harry Potter and the Sorcerer's Stone', List).  
  
List = []  
List = ['Harry Potter and the Chamber of Secrets']  
List = ['Harry Potter and the Chamber of Secrets', 'Harry Potter and the Prisoner of Azkaban']  
List =

'Harry Potter and the Deathly Hallows: Part 2']  
false
```

- `worked_together('christopher_nolan', 'jessica_chastain', Film).`

```
worked_together('christopher_nolan','jessica_chastain', Film).  
Film = 'Interstellar'
```

Recommendations:

- Mood/Genre Mapping based on the mood the user chose and adding the gender into consideration → outputting a result of a recommendation, then the user can choose “next” to keep outputting other recommendations.

Examples:

Test 1:

```
recommendation_system.  
Welcome to the Film Recommendation System!  
Could You please enter your name ??  
youssef  
Helloooooo, youssef !  
Please choose one of the following :  
1-Menu to choose your own criteria.  
2-General questions recommendations.  
2  
Enter Your Age :  
21  
Enter Your gender :  
male  
What is your mood right now (happy - sad - bored - normal - adventurous - excited - stressed) ?  
adventurous  
What is the minimum Movie Rating you normally watch ?  
7  
current recommendation is:  
Inception  
thriller 2010 8.8  
actors: leonardo_dicaprio, joseph_gordon_levitt, ellen_page  
directors: christopher_nolan  
If you have watched that film before or need another recommendation, write next.  
Else, write done.  
done  
Finished  
true
```

Test 2:

 recommendation_system.

Welcome to the Film Recommendation System!
Could You please enter your name ??

ahmed

Helloooooo, ahmed !
Please choose one of the following :
1-Menu to choose your own criteria.
2-General questions recommendations.

2

Enter Your Age :

52

Enter Your gender :

male

What is your mood right now (happy - sad - bored - normal - adventurous - excited - stressed) ?

normal

What is the minimum Movie Rating you normally watch ?

8

current recommendation is:
The Matrix
action 1999 8.7
actors: keanu_reeves, laurence_fishburne, carrie_anne_moss
directors: the_wachowskis

If you have watched that film before or need another recommendation, write next.
Else, write done.

done

Finished
